## Turkey Market Summary and Outlook November 29, 2022

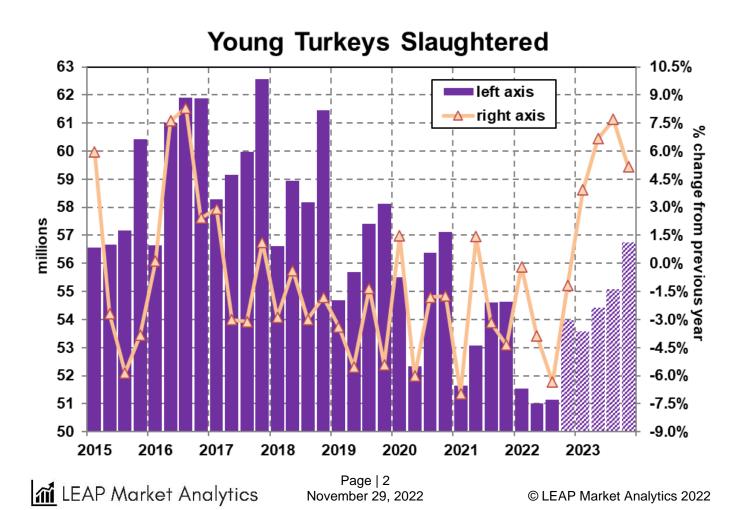

## **Executive Summary**

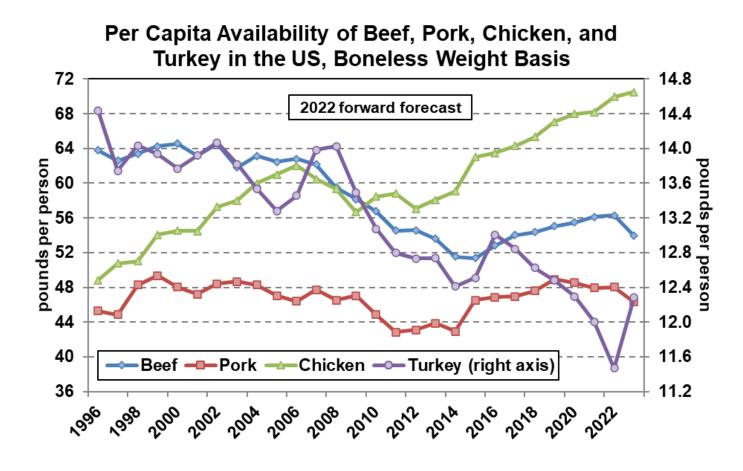

According to USDA-AMS estimates, total turkey slaughter in the US during the six-week period leading up to the week of Thanksgiving posted a 2.5% increase from last year, bolstered by a 5.4% increase in young toms slaughtered compared to year-prior levels. That was a fairly remarkable achievement for an industry still battling through highly pathogenic avian influenza (HPAI), although it should be noted the tom slaughter pace was on the sluggish side last fall. It also highlights producers' ability to harvest a relatively sufficient number of birds when they're needed most, even if it means disrupting normal marketing schedules. Young toms weighed an average of 42.5 pounds at slaughter during the aforementioned six-week stretch ahead of Thanksgiving this year, down from an average of 44.0 pounds during the same time period a year earlier. Getting past all of the birds that were "pulled forward" for the holiday, we should probably expect a "lull" in the slaughter pace to close out fall. This is why LEAP Market Analytics (LMA) still expects the number of turkeys slaughtered during the Oct-Dec quarter to wind up at a slight deficit to last year.

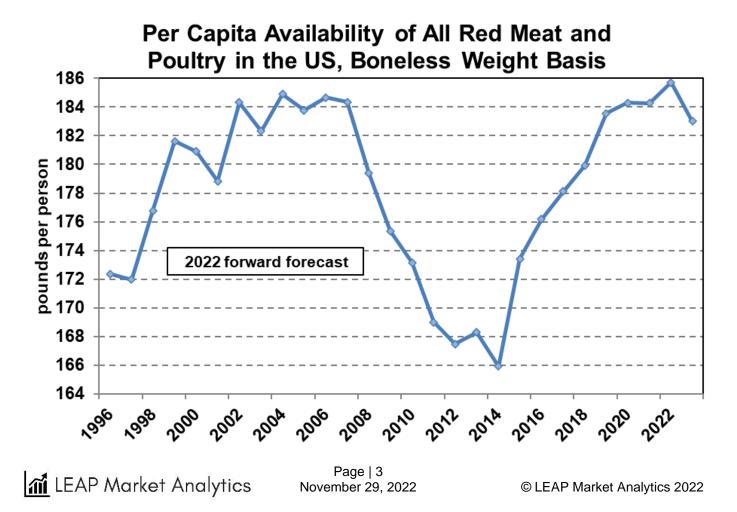

That deficit is shrinking fast, however, and the stage remains set for an abrupt rebound in turkey supplies next year so long as the HPAI threat largely fades from view. Domestic per capita availability of turkey next year could easily bounce back 6%-8% next year if total HPAI losses are contained to a million or less. The supply outlook for beef and pork is very different, though, as those two categories are almost guaranteed to shrink in 2023. Chicken supplies are more of a wild card, however, as the US broiler industry is riding a wave of positive growth momentum right now, but early signs are emerging of a pivot back toward smaller output. All that to say, competing meat supplies are "burdensome" presently but should, for the most part, turn in a more favorable direction for turkey industry stakeholders looking deeper into 2023. Turkey markets have yielded very little ground on the demand/price front, and one segment that is effectively "putting on a show" is mechanically deboned turkey (MDT). With cold storage holdings of MDT totaling just 2.2 million pounds on October 31<sup>st</sup>, up only slightly from an all-time low (reporting on this data series began in 2009) of 1.9 million pounds on September 30<sup>th</sup>, the observed price behavior certainly makes sense.

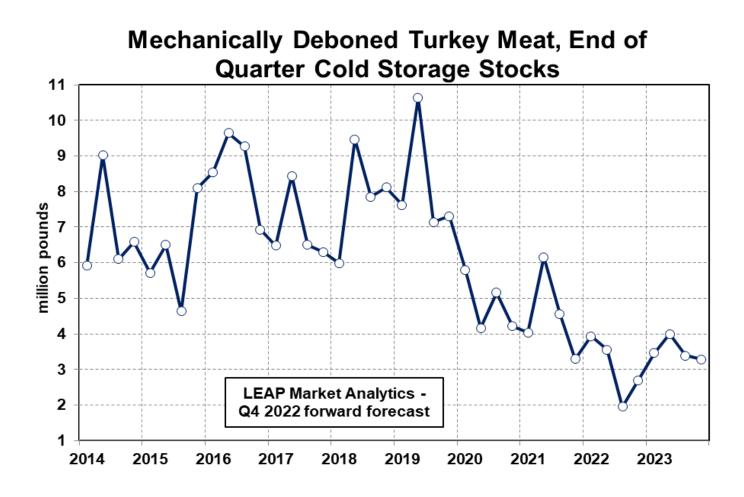

Spot prices for fresh MDT keep hovering in the low-to-mid \$0.80s (USDA), implying explosive (wholesale and seasonally-adjusted) demand that is stronger than anything observed in at least a few decades. The only "problem" for MDT is that it is increasingly "overvalued" relative to key competing product categories like MDC and pork trim. LMA is forecasting MDT demand to cool off next year from these "stretched" levels but remain fairly robust by longer-term standards. Fresh MDT is expected to slip back to an annual average in the mid-to-upper \$0.60s, but given the widening spreads to those other categories, the risk is greater for MDT prices to wind up below expectations than exceed them. The narrative surrounding MDT could almost be repeated verbatim for the whole wing market. Turkey wing demand is in such a position of strength that a pivot lower appears unavoidable, and as with MDT, LMA could very well be too conservative in its view of how much wing demand will slumber in the year ahead. Echoing the sentiments above, regardless of what supply-side trends may be signaling, composite turkey prices are historically "overvalued" relative to other protein categories, a clear negative omen for turkey demand.
